

Recommendation Letter

Dear Sir or Madam,

As a researcher from College of Biosystems Engineering and Food Science, Zhejiang University, I take great pleasure in writing this letter of recommendation to support the candidacy of Amy Wang for admission to your university.

I met Amy Wang in July 2025 when she attended a scientific research project for high school student, which I directed at the Department of Food Science. In this project, Amy Wang has learned the basic knowledge about microbiology, as well as the laboratory operations in bioengineering. She made a final presentation based on her research report “Control of *Botrytis cinerea* by Volatile Organic Compounds of *Bacillus* and Its Application in Grape Mildew Prevention”. Amy Wang demonstrated the ability to apply sophisticated concepts to real-world problem. The report showed her insight, depth of understanding, and great written skill. She also showed herself to be a committed student and contributor to the group.

I am convinced that Amy Wang would bring so much to your school, both inside and outside of the classroom. She has a strong sense of responsibility, prudence seriously, a good professional quality for the experimental study, and I believe she would be an excellent addition to your university. If there is any additional information, I can provide to support you in your decision-making process, please do not hesitate to contact me.

Sincerely,

A handwritten signature in black ink that reads 'Wen-Wen Zhou'.

Wen-Wen Zhou

Associate Professor

Deputy Director of Institute of Food Bioscience and Technology
